Overview

Swarm Aqua® has once again proven to be the go-to choice for high-quality, functional, and aesthetically pleasing surface water drainage, this time in a merchant yard project at MKM King's Lynn.

Project Summary

Familiar with the robustness and ease of installation offered by Swarm Aqua® from previous projects, this contractor had no reservations about using our system for this project. Likewise, MKM was eager to utilise Swarm Aqua® thanks to its competitive pricing and appealing aesthetic.

The Swarm Aqua® system was chosen not only for its cost-effectiveness but also for its simplicity and adaptability. The 'push-to-connect' system meant minimal disruption to the ongoing business, and there was no need for complicated fixing methods or figuring out 'which part goes where.'

Swarm Aqua®'s aesthetics were also a deciding factor for this project. It seamlessly fit into the design of the merchant yard, complementing the overall appearance without compromising its functionality. Its unobtrusive design made it the perfect fit for this yard proving once again that practicality and appearance can go hand in hand.

Available in sizes ranging from 150mm to 375mm wide, with a choice of iron top or steel slot, Swarm Aqua® is suitable for a variety of applications and surfaces. For this project, it demonstrated its resilience, with a loading capacity up to F900kN, ensuring it will withstand the test of time.

We are proud to continue supplying our versatile and efficient Swarm Aqua® linear drainage system to merchant yards and various other projects across the UK. Our commitment to quality, functionality, and aesthetics drives our mission to provide the best drainage solutions in the industry.
