Overview

Swarm Aqua® was chosen to be installed at this merchant yard in Ashford, Kent, in both the car park and concrete yard, proving the versatility of the Swarm Aqua® system, which can be installed in a number of locations, surface finishes and load ratings.

Project Summary

Used in lieu of traditional grated systems for the project, Swarm Aqua® is an unobtrusive yet robust and functional surface water drainage system. Simplicity of the system was paramount for this project, alongside a quick lead time. By using just one size and type of product in all areas, this merchant experienced minimal disruption to ongoing business, alongside not having to figure out 'which part goes where'. The Swarm Aqua® system itself is also a simple 'push to connect' system, with no complicated fixing methods or on-site assembly.

Swarm Aqua® is available in a range of sizes from 150mm to 375mm wide and 450-600mm sizes available upon special request, with a choice of iron top or steel slot and a loading capability up to D400kN or F900kN. Swarm Aqua® drainage channels are suitable for any application and surface finish from a residential driveway through to a major distribution centre.

Having supplied to many merchant yards across the UK, we are delighted to add this MKM yard in Ashford to our ever growing portfolio.
